

Claims

1. A cutoff device, comprising:

a framed housing (30) opened at a lower end thereof,
and supporting a cover (33) having a cutoff wall (31), the
5 cutoff wall being opened at a lower end thereof; and

a flexible liquid bag (40) attached to the lower end
of the cutoff wall (31).

2. The cutoff device according to claim 1, wherein
the housing (30) comprises:

10 a telescopic column (35) that is extensible or
compressible;

an upper support frame (36) coupled to an upper end
of the telescopic column (35); and

a lower support frame (37) coupled to a lower end of
15 the telescopic column (35).

3. The cutoff device according to claim 1, wherein an
outer surface of the cutoff wall (31) of the cover (33) is
supported by horizontal support bars (38) that are arranged
at regular heights.

20 4. The cutoff device according to claim 1, wherein
the lower end of the cutoff wall (31) is fastened to the
upper end of the liquid bag (40) using a zipper (39).

5. The cutoff device according to claim 1, wherein the liquid bag (40) contains liquid, such as water, therein, with a heavy substance, such as sand, soil or powdered or granulated metal added to the liquid.
